To whom it may concern,

Letter of Reference
Liam Beckett, Senior Game Programmer

I am writing this letter of recommendation for my colleague Liam Beckett, who worked as a Senior Game Developer at CerebralFix from 2018 to 2023. Liam has gone from strength to strength in his technical abilities, starting as an intern and making himself indispensable at CerebralFix.

Liam spent four and half years working at CerebralFix, building on his Software Engineering degree. I have worked closely with Liam on a variety of projects over the years and can speak to his high degree of competency in his field. Liam holds himself to high coding standards as he does with all aspects of his role, earning himself the Senior title at CerebralFix. Liam is proficient in working with Unreal Engine and has a solid grasp of C++. He is adaptable and a quick learner, picking up new skills and able to work with emergent technologies such as Virtual Production and other experimental features as they come into early release for Unreal Engine.

In addition, Liam has made a commendable Technical Lead on many projects at CerebralFix. Due to the nature of 'work for hire', it is important to manage the scope and timelines of projects from a technical perspective and communicate directly with the creative and technical factions of our clients, to ensure the project is delivered successfully. These are some of the responsibilities that Liam held when acting as the Technical Lead on projects. Something he did with great success through tough deliveries during the COVID pandemic where remote working made this communication and organisation even more necessary.

As Head of Programming at CerebralFix, I have only had positive interactions with Liam. He is always flexible and ready to jump into any project when needed. His great work ethic has meant that no matter the challenge. Liam's outstanding communication and organisational skills made him a fantastic asset on projects and within the wider studio.

In conclusion, I have no hesitation in recommending Liam Beckett. Please do not hesitate to contact me to discuss Liam's work with CerebralFix further.

Sincerely,
Keegan Gibson

K Gibson

Lead Programmer at CerebralFix
Specialising in Unreal Engine
